

# Activeworx Security Center (ASC)

a unified security information and log management platform

## ACTIVEXORX ENTERPRISE

- Log Center
- SECURITY CENTER
- Event Manager
- Snort Management Center

Activeworx Security Center™ (ASC) is a Complete Security Information Management solution, providing SIEM and Log Management in a single solution. Activeworx ASC has the ability to collect, normalize and correlate data while supplying you with detailed security alerts, vital reports for investigations, regulatory compliance and deep forensic analysis. Activeworx design is both, easy to install and offering you mission-critical security tools at an affordable price.

Activeworx Security Center™ (ASC) also provides powerful n-tier backed functionality, such as flexible collection engines utilizing standards based parsing algorithms and memory based correlation engine to identify hidden threats.

Activeworx Security Center™ (ASC) can monitor, analyze and alert on almost any event generated on a network to determine security and forensic information. Activeworx's intuitive design is both easy to install and easy to use and provides mission-critical security tools.

Activeworx Security Center™ (ASC) is a full featured Security Information and Event Management software solution. Discover risks, correlate relevant security information, evaluate vulnerabilities and communicate actionable threats to security teams.

## Flexibility

Activeworx Security Center™ (ASC) robust, built-in reporting engine and multi-vendor support enables administrators to leverage current technologies and is flexible enough to support any new technologies as they are implemented. ASC's modular design allows organizations to install units as needed and add new ones as security needs change.

## Save Time

Activeworx Security Center™ (ASC) ties in logs and data from all of your security devices to provide you with critical alerts, out-of-the-box reports for compliance and built-in forensics tools. Drilling down into events of interest can be accomplished promptly. ASC installs in a fraction of the time of other SIEM tools.

## Save Money

Activeworx Security Center™ (ASC) modular design, multiple vendor support, easy installation and live "in your environment" evaluations provides immediate value and eliminates the need for expensive post-purchase installation consultancy.

# Features and Benefits

## TECHNICAL SUPPORT

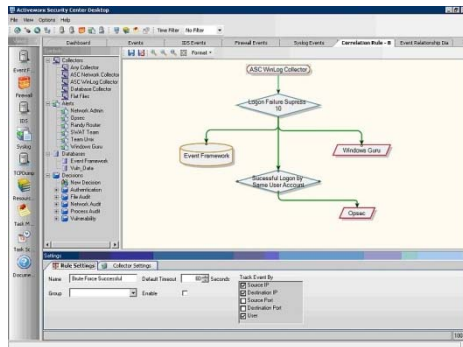

24 Stunden technischer Support durch Knowledgebase des Herstellers.

Telefonischer technischer Support während der Geschäftszeiten oder per E-Mail an:

[support@activesphere.net](mailto:support@activesphere.net)

## ZERO DOWNTIME

Ständige Verfügbarkeit des Supports durch ein weltweites Partnernetzwerk in über 40 verschiedenen Ländern geben telefonisch und per E-Mail Unterstützung in der Landessprache

## Reduce costs while increase efficiency

Activeworx Security Center™ (ASC) modular software design allows for more cost effective installations than typical appliance based solutions. As a software product, free evaluations are available and technically supported and by purchase time the product is installed and working, all but eliminating the need for post sale consulting fees.

## Centralize events with the Activeworx Event Framework (AEF)

The Activeworx Event Framework provides a standardized view of events in your enterprise. This framework provides a simple single tiered approach or a complex multiple tier international approach to collect analyze and process events.

## Enterprise Class Reporting

Reporting is one of the most powerful features of Activeworx providing an enterprise class reporting engine to handle reporting on millions of events. It does this by generating clean looking graphical reports for management and detailed reports for analysts.

## Detailed alerting

Knowing when an event has occurred is imperative to security administrators. Activeworx provides simple rules based alerting and complex alerting from our correlation engine through several standardized protocols, such as email and Syslog.

## Event relationship diagrams

Activeworx has a powerful diagram engine that displays events and the relationship between them. Once these events are displayed, you can replay the order in which they occurred, color code the events to highlight different characteristics, perform different types of auto layouts to change the way in which the events are being displayed, or drill down into the events to gather more details.

## Strong forensic tools

Activeworx enables you to easily drill down into event data providing vital details to help you investigate threats and attacks. It also provides flexible ways of viewing and displaying information to fully understand the actions the attacker took.

## Flexible Dashboards

Activeworx provides a complete user customizable dashboard system to show information of interest in over 100 different dashboard panels in different visualization format such as lists, graphs, diagrams and geographical maps. Dashboard panels are fully customizable by the each user to display what is of interest to them.

## Integration with Snort

Snort is the most widely used intrusion detection system today. Activeworx integrates tightly with the Snort event database to provide high valued information from your existing Snort installations.
